## Professional Summary

A dedicated and results-oriented React.js Developer with 2 years of experience in building, testing, and deploying responsive web applications. Proficient in developing both client Applications and internal Applications.. Skilled in using modern frontend technologies including React, JavaScript (ES6+), Material UI, and Bootstrap within Agile environments. Seeking to leverage my frontend development skills to contribute to a challenging and innovative team.

---

## Technical Skills

- **Frontend:** React.js, JavaScript (ES6+), HTML5, CSS3, Redux Toolkit
  - **UI Libraries:** Material UI, Bootstrap
  - **Databases:** SQL
  - **Tools & Methodologies:** Git, Jira, VSTS (Azure DevOps), Agile/Scrum, RESTful APIs
- 

## Professional Experience

**React.js Developer** | Revaan IT Solution | Ananthapur, AP | July 2023 – Present

As a Frontend Developer, I specialize in building and maintaining scalable and responsive web applications using React.js. I collaborate with cross-functional teams to translate business requirements and UI/UX designs into high-quality code, focusing on performance and user experience for both internal tools and client-facing financial applications.

### Key Projects:

#### 1. Fiscal Application (Client Project)

*A client application for managing financial products like loans, credit lines, and invoices.*

- Developed key frontend modules for managing **loans, credit lines, and customer invoices**, improving user interaction with financial data.
- Implemented the UI and logic for **auto-debit functionalities and payment processing**, integrating with secure third-party APIs.
- Built responsive forms and data tables to allow users to view transaction histories and manage their financial accounts seamlessly.

## 2. Objective Management System (Internal)

*A performance management tool to track employee objectives and integrate sprint progress from multiple VSTS boards.*

- Engineered a unified dashboard by integrating with **multiple VSTS (Azure DevOps) APIs** to consolidate and display sprint tickets from internal and client boards.
- Developed features for assigning monthly objectives, allowing users to add comments and upload screenshots for progress validation.
- Created data visualizations to showcase sprint-wise performance for both employees and management, enhancing productivity tracking.

## 3. Change Request (CR) Management (Internal)

*An internal tool for tracking project timelines and resource allocation.*

- Built a dynamic dashboard to visualize project health by comparing **Planned Hours vs. Actual Hours**.
- Implemented a report generation module to export project status summaries, providing key data for stakeholder reviews.

## 4. HR Application (Internal)

*A centralized portal for managing employee information.*

- Designed and developed a **tab-based interface** to present comprehensive employee details in an organized and easily accessible manner for the HR department.
